

Food Chain Cup Stackers

These could be made for any habitat. Just put clear packing tape around picture to stick to cup and label the rim with the item. Students put them in order for Food chains. *(Be sure to include a sun for each set)*. You can also have them identify which are herbivores, carnivores, producers, by placing cups in appropriate sort. You can give choices in the first and second order consumers so there is more than one right food chain.

Algae

Shrimp

Shark

Filter feeders – (Decomposers)

Fish

Seal

Grass

Grasshopper

Snake

Mouse

Owl

Fungus - decomposer

Producer

Herbivore

Carnivore
